Analysis

Who are Duke's Trump and Biden voters?

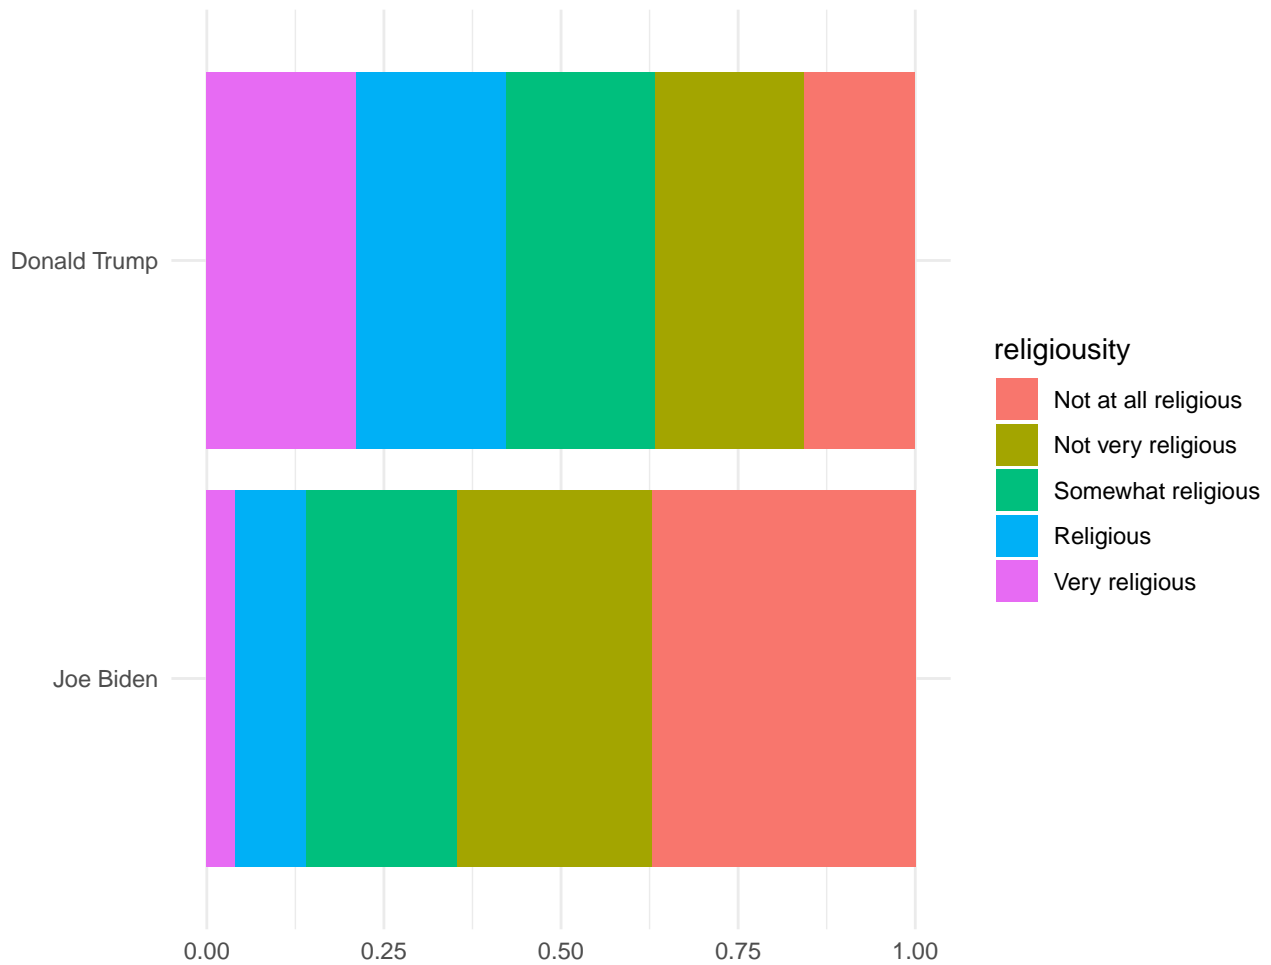

more support for trump among religiously affiliated students

NOTE: Howie Hawkins and Jo Jorgenson removed from data set.
One student voted for each candidate.

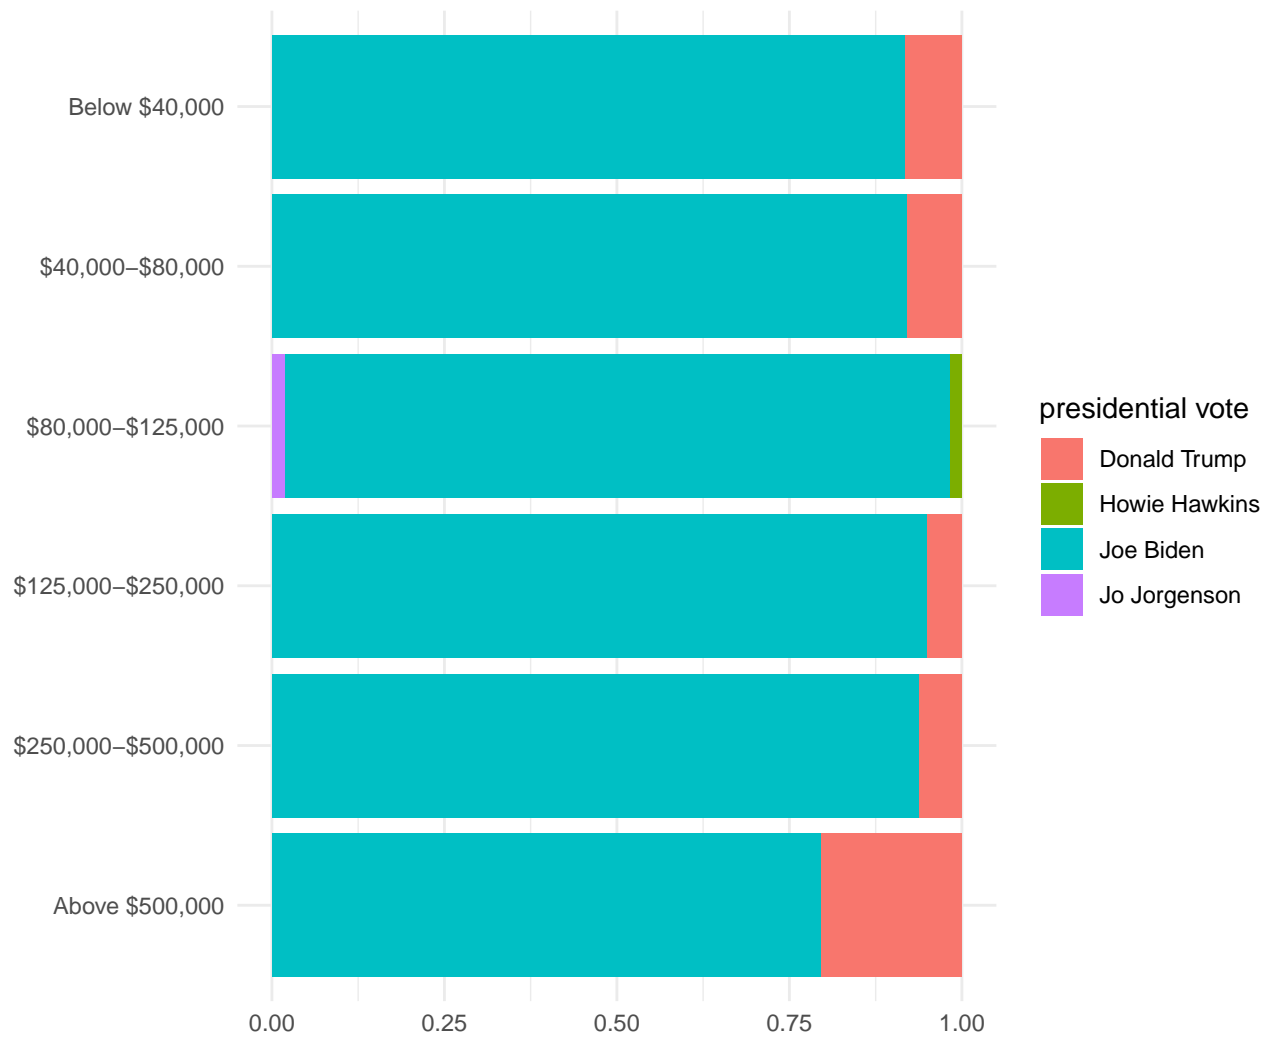

more support for trump among religious students

NOTE: Howie Hawkins and Jo Jorgenson removed from data set.
One student voted for each candidate.

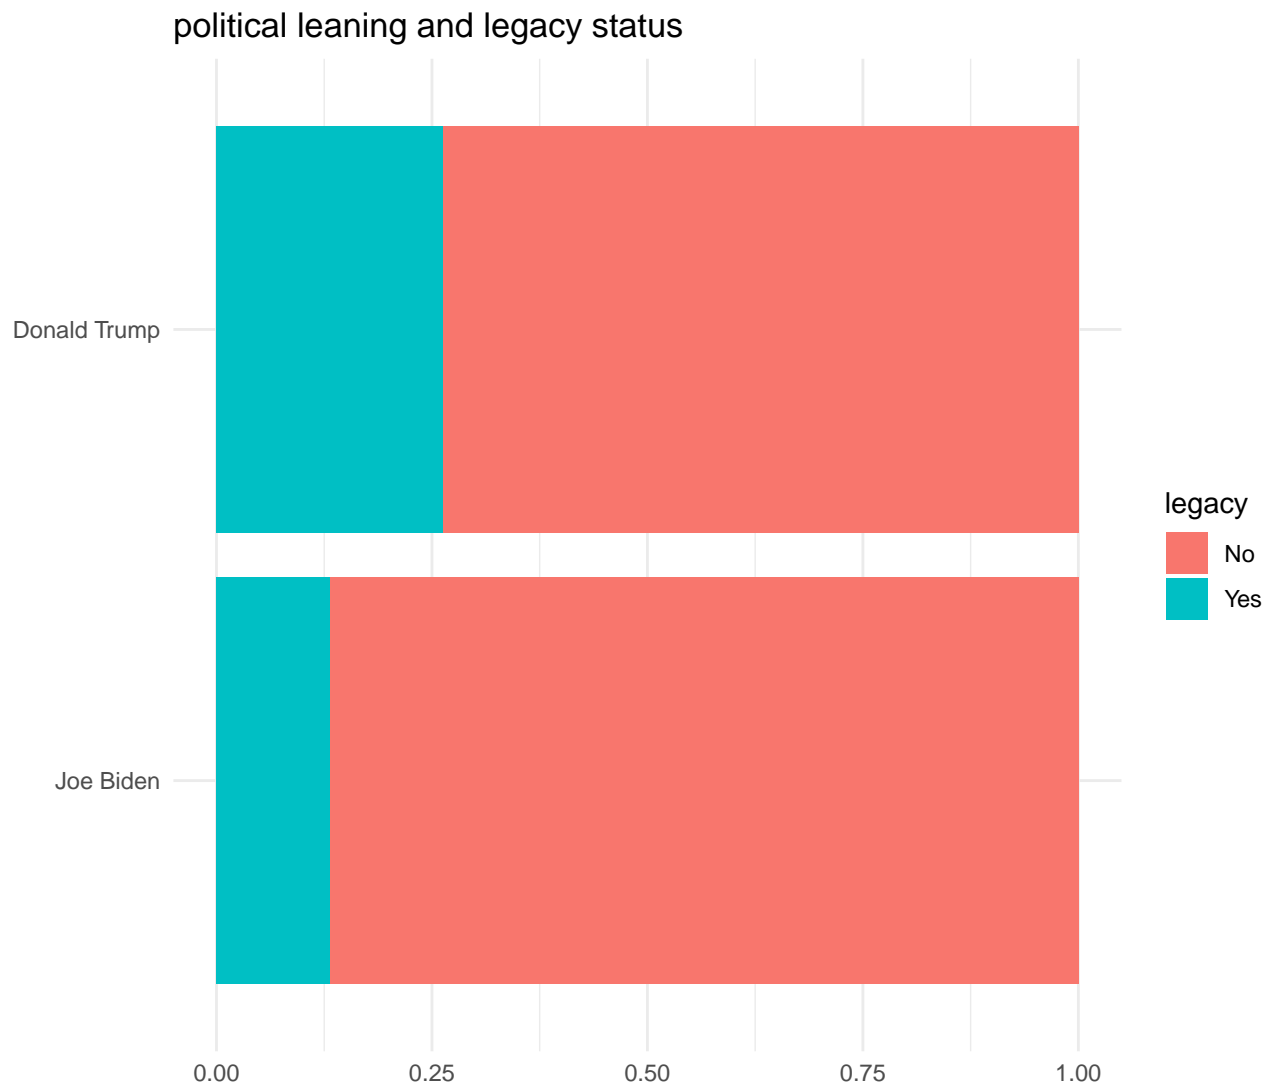

The students who voted for Trump overwhelmingly identified themselves with a religion (versus agnostic or atheist). A similar breakdown is visible when looking at support for Trump with an eye to religiosity; well over 50% of Biden voters identify themselves as “Not at all religious” or “Not very religious” while for Trump, that number is below 40%.

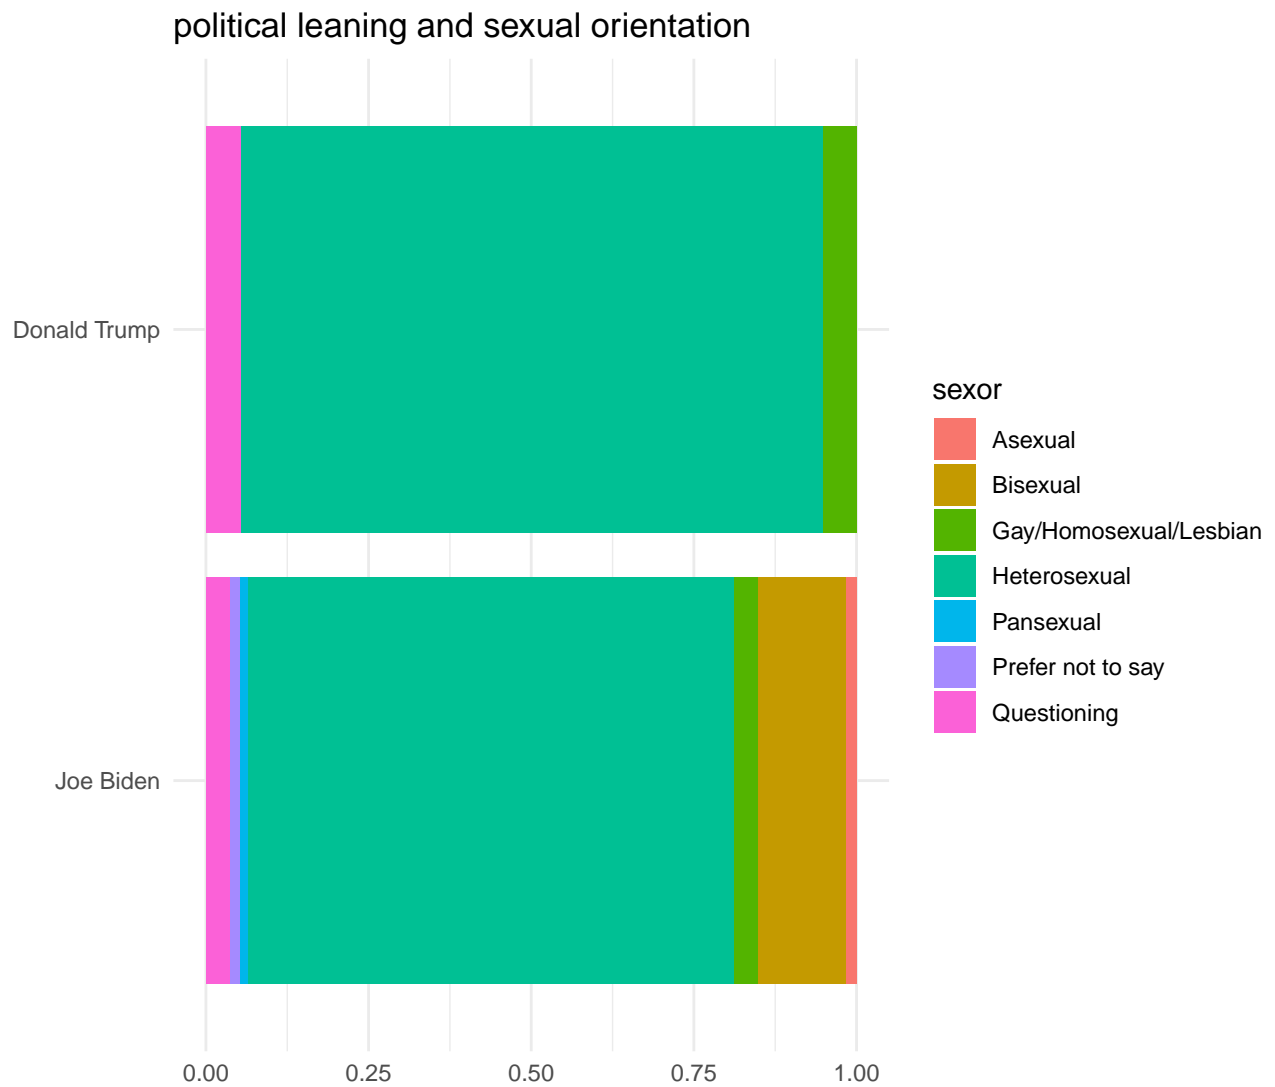

income and presidential vote

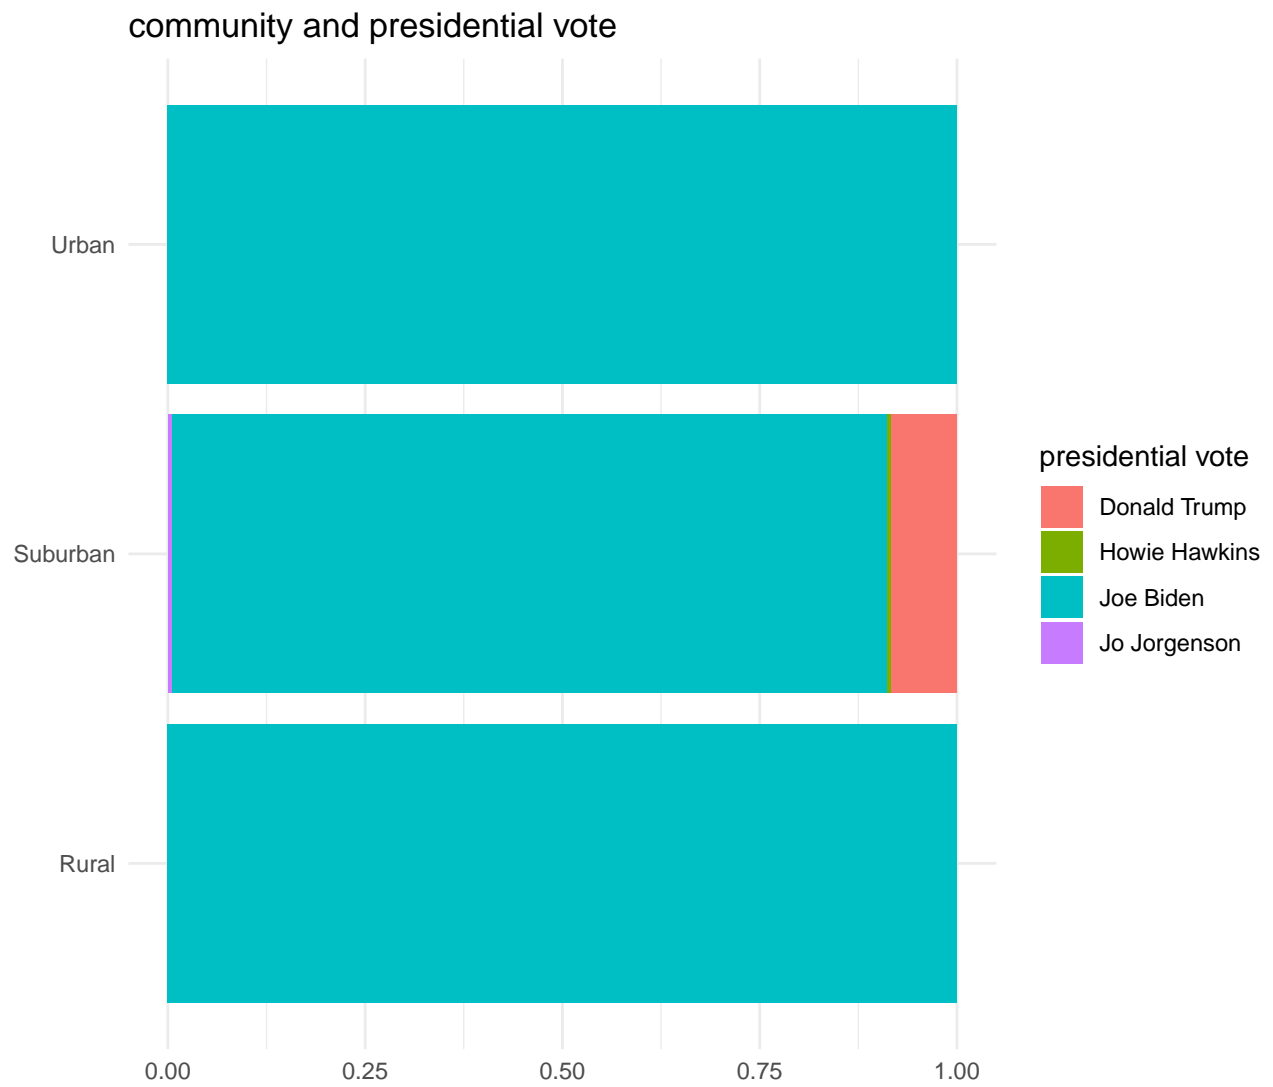

Biden voters are present in every income bracket and Trump voters are present in almost every income bracket, with a slightly greater representation in the “Above \$500,000” category.

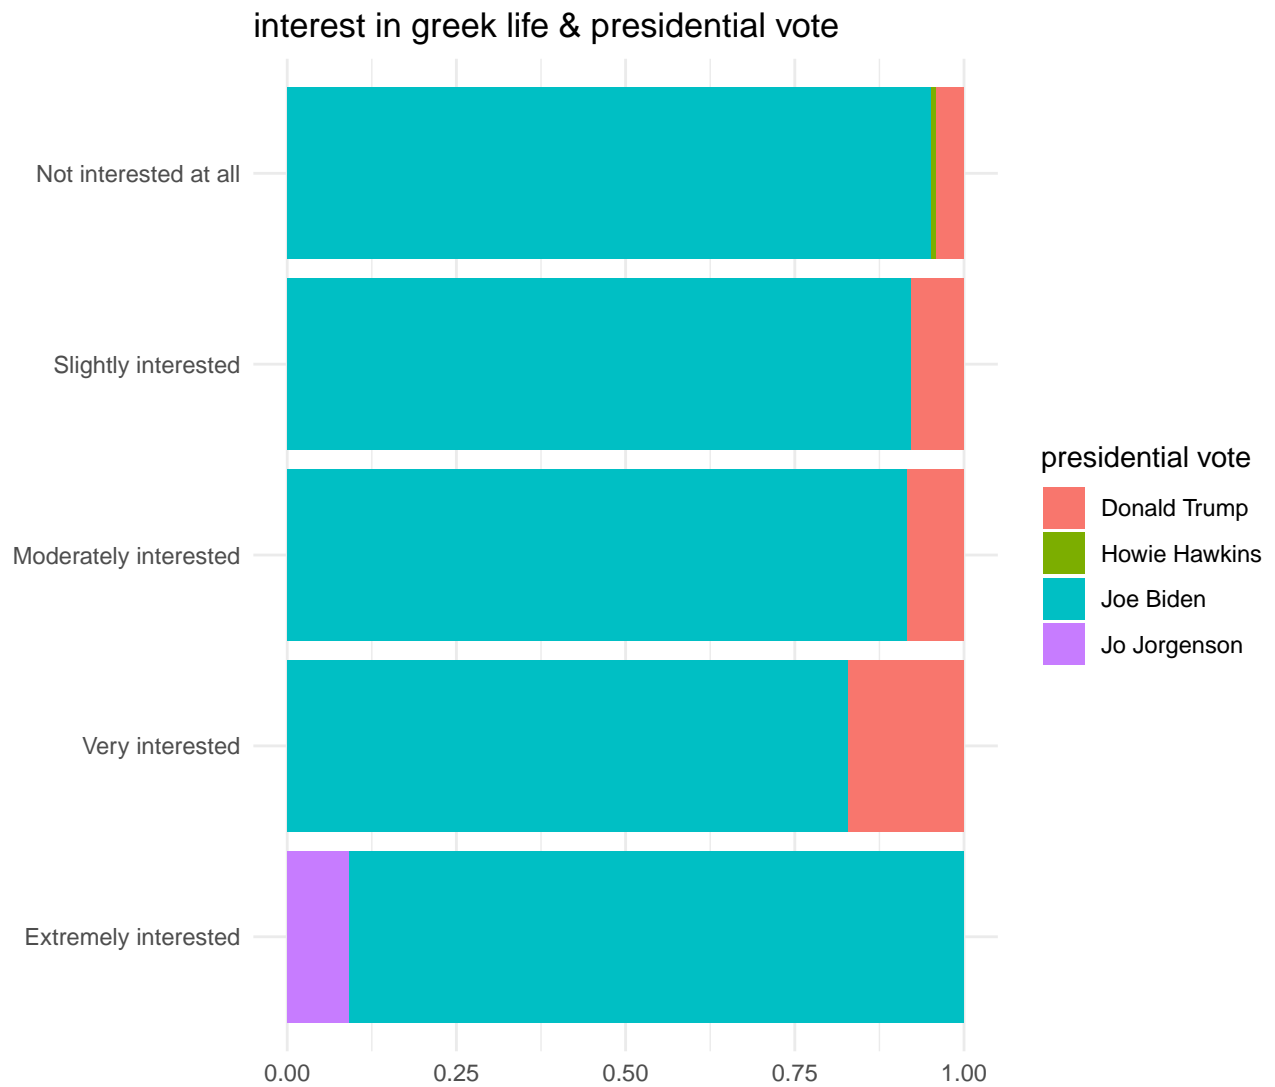

Slightly more legacy students voted for Trump, though this may be more attributable to their income bracket (legacy students are overrepresented in higher income brackets) than their status as legacy students.

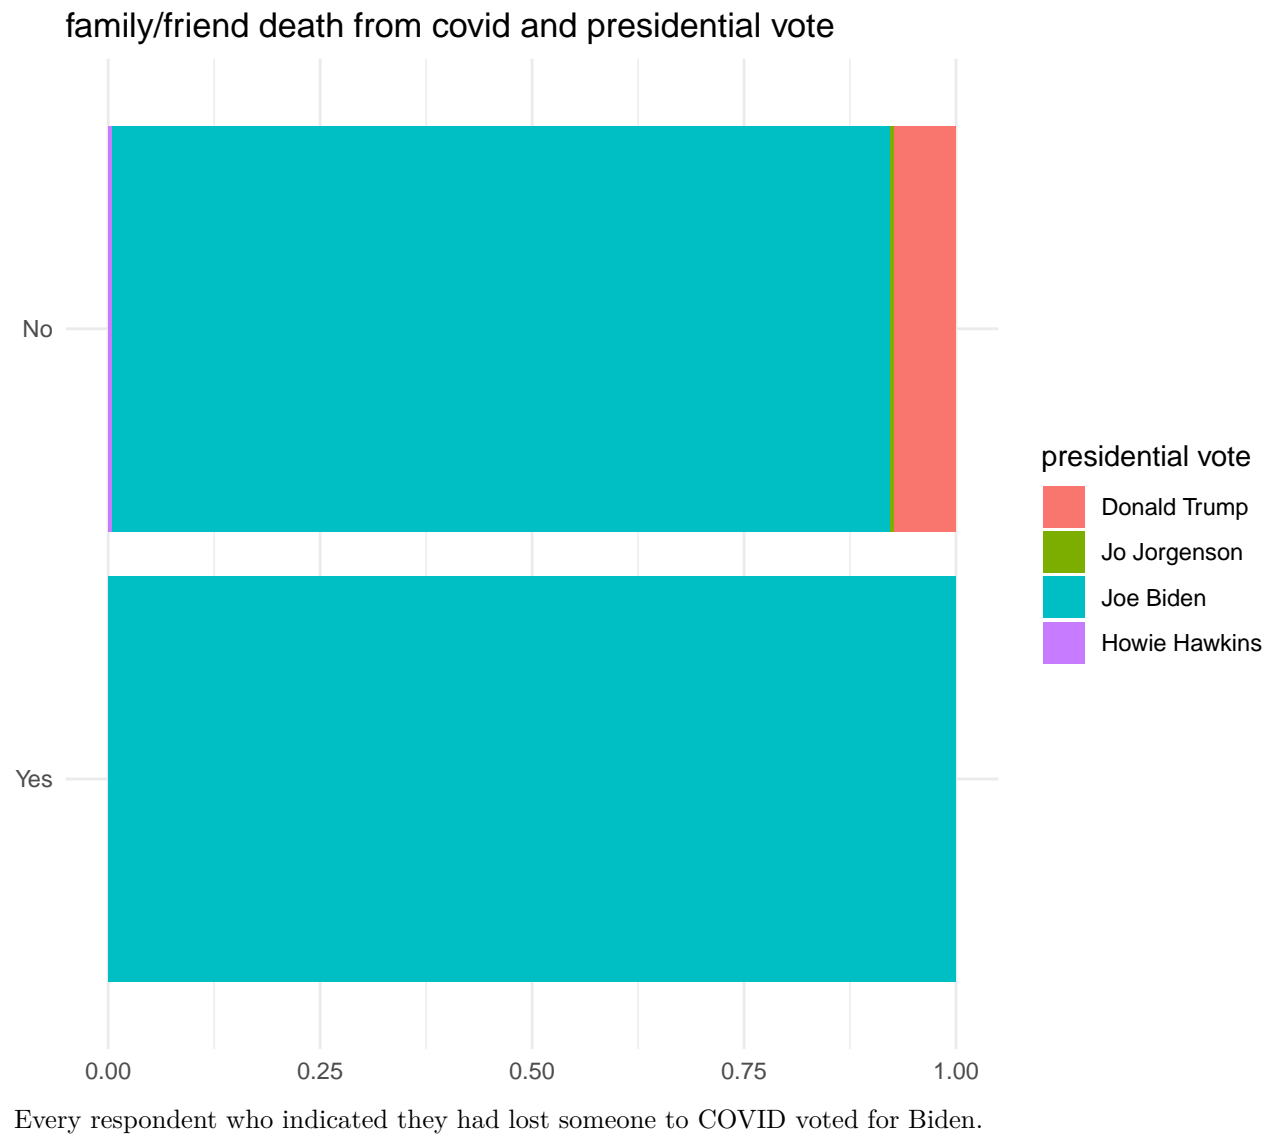

In our sample, about 25% of students that voted for Biden identify with a sexual orientation other than “Heterosexual”.

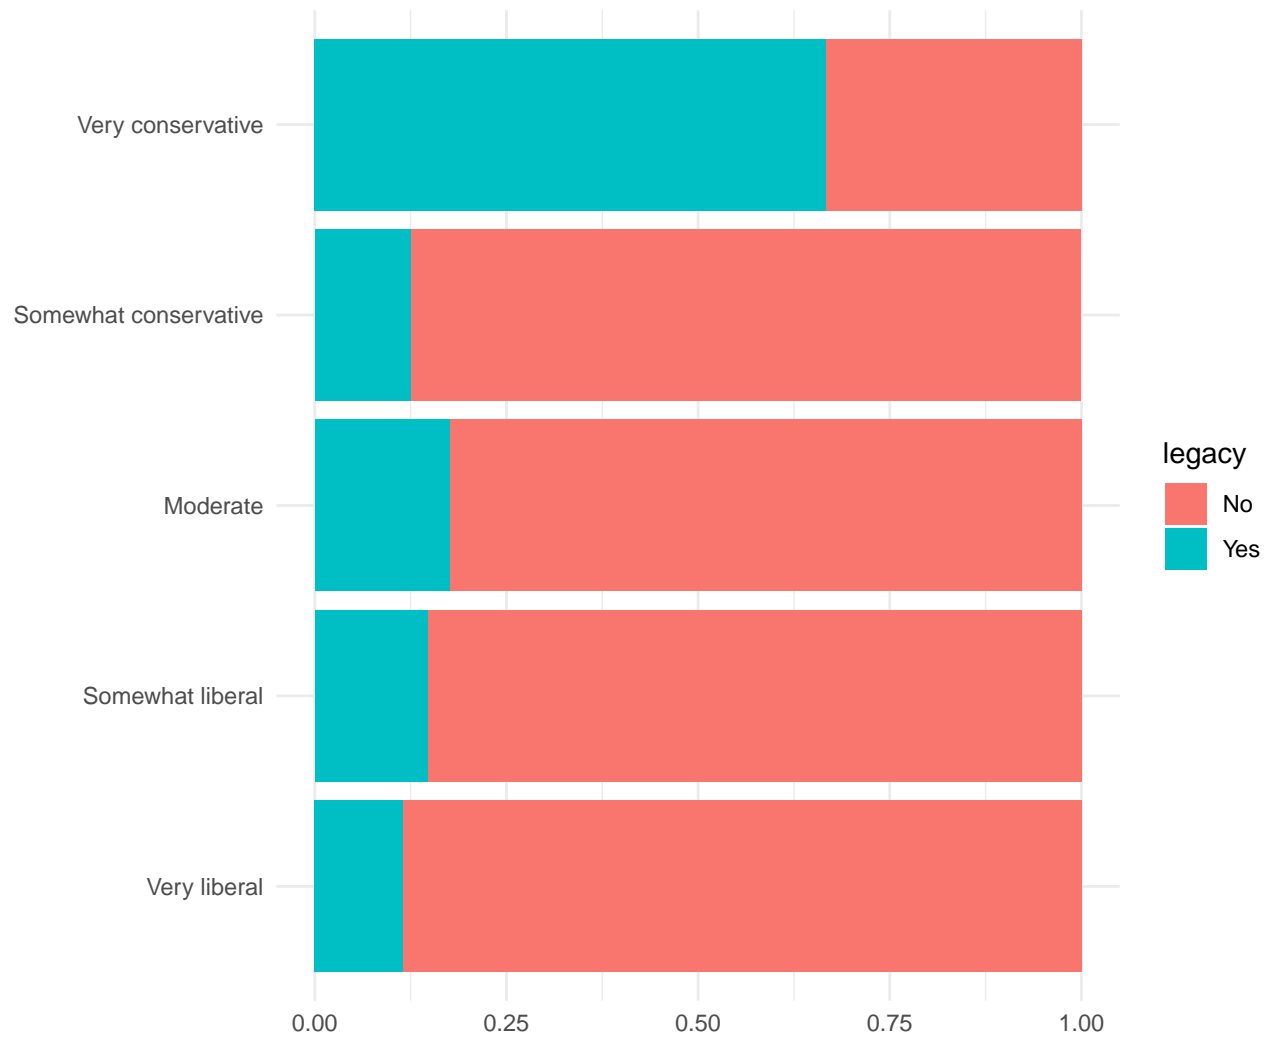

All students who voted for a candidate other than Biden came from a suburban community.

Biden voters show varying degrees of interest in greek life while Trump voters are more likely to indicate that they are “Very interested” in greek life.

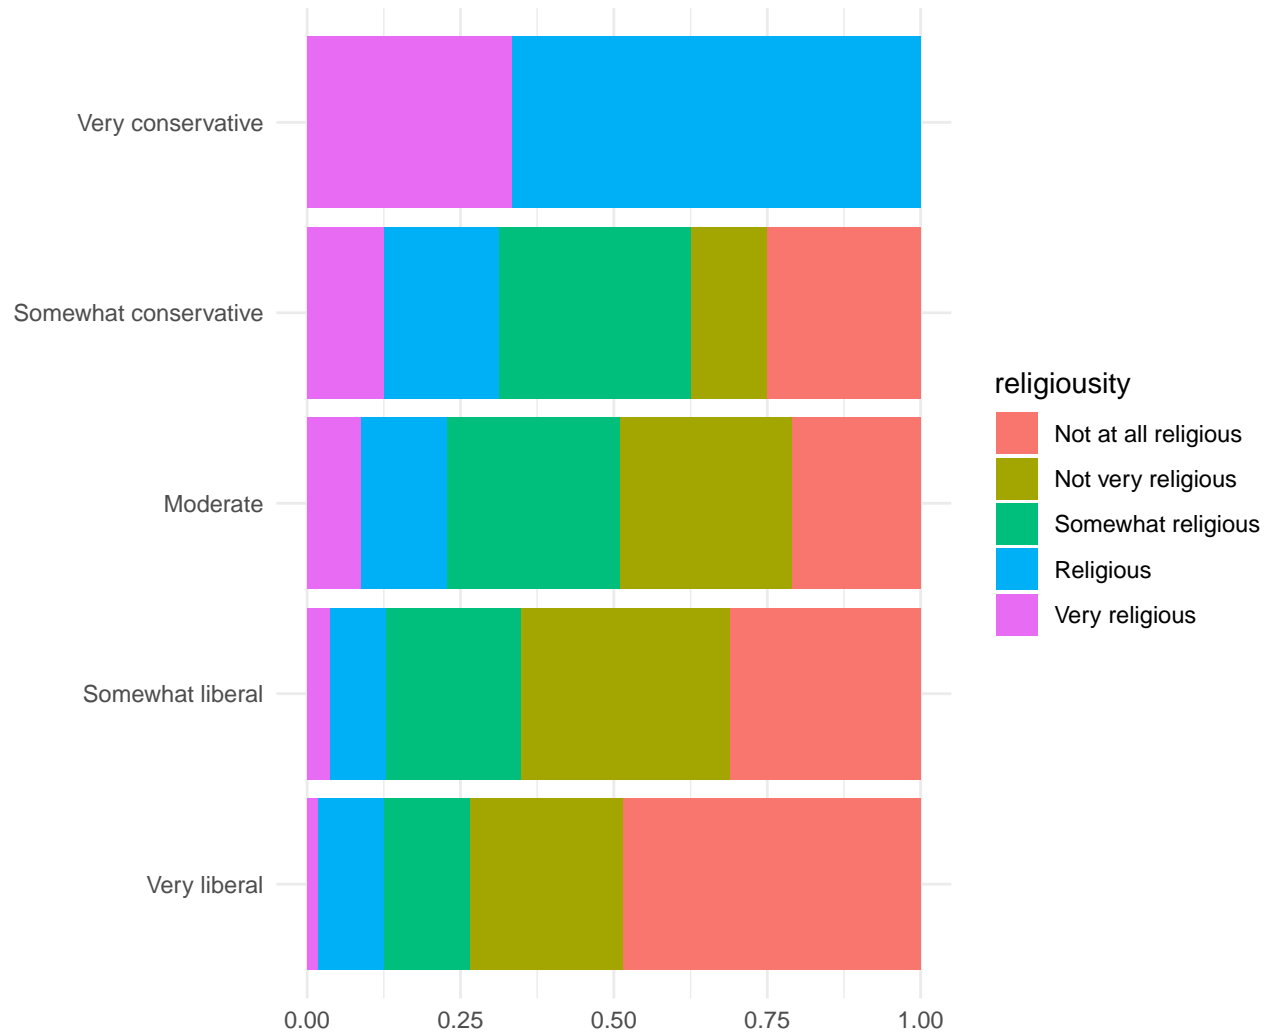

Legacy students are more likely to indicate that they are very conservative
political leaning and legacy status

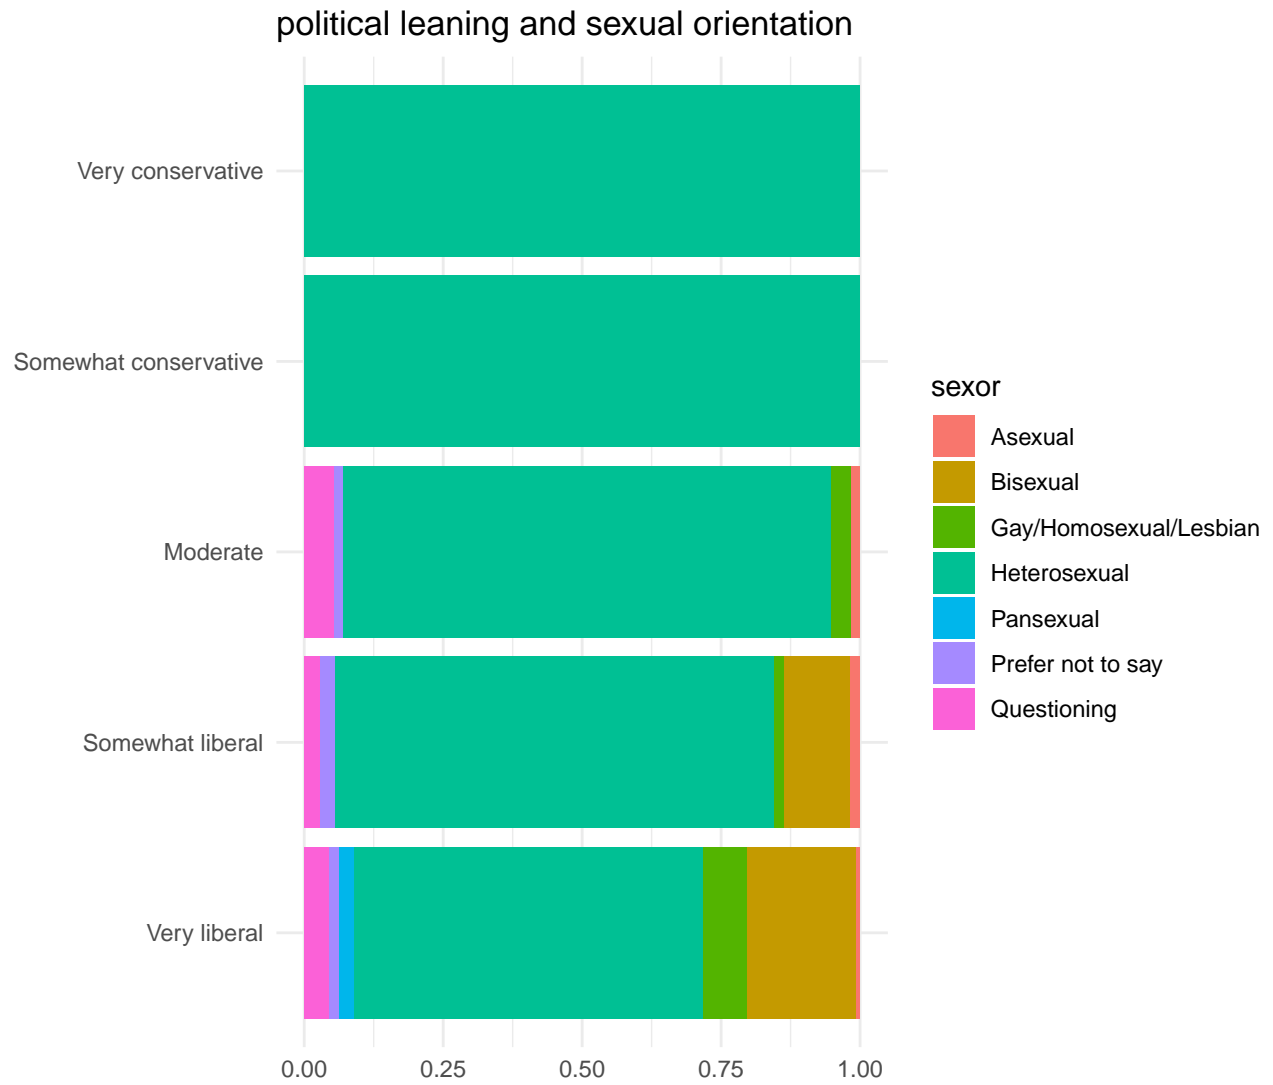

Of the students who indicated that they are “Very conservative,” over 60% have a parent or sibling that attended Duke.

Who are Duke's conservatives and liberals? (I hate this title too dw)

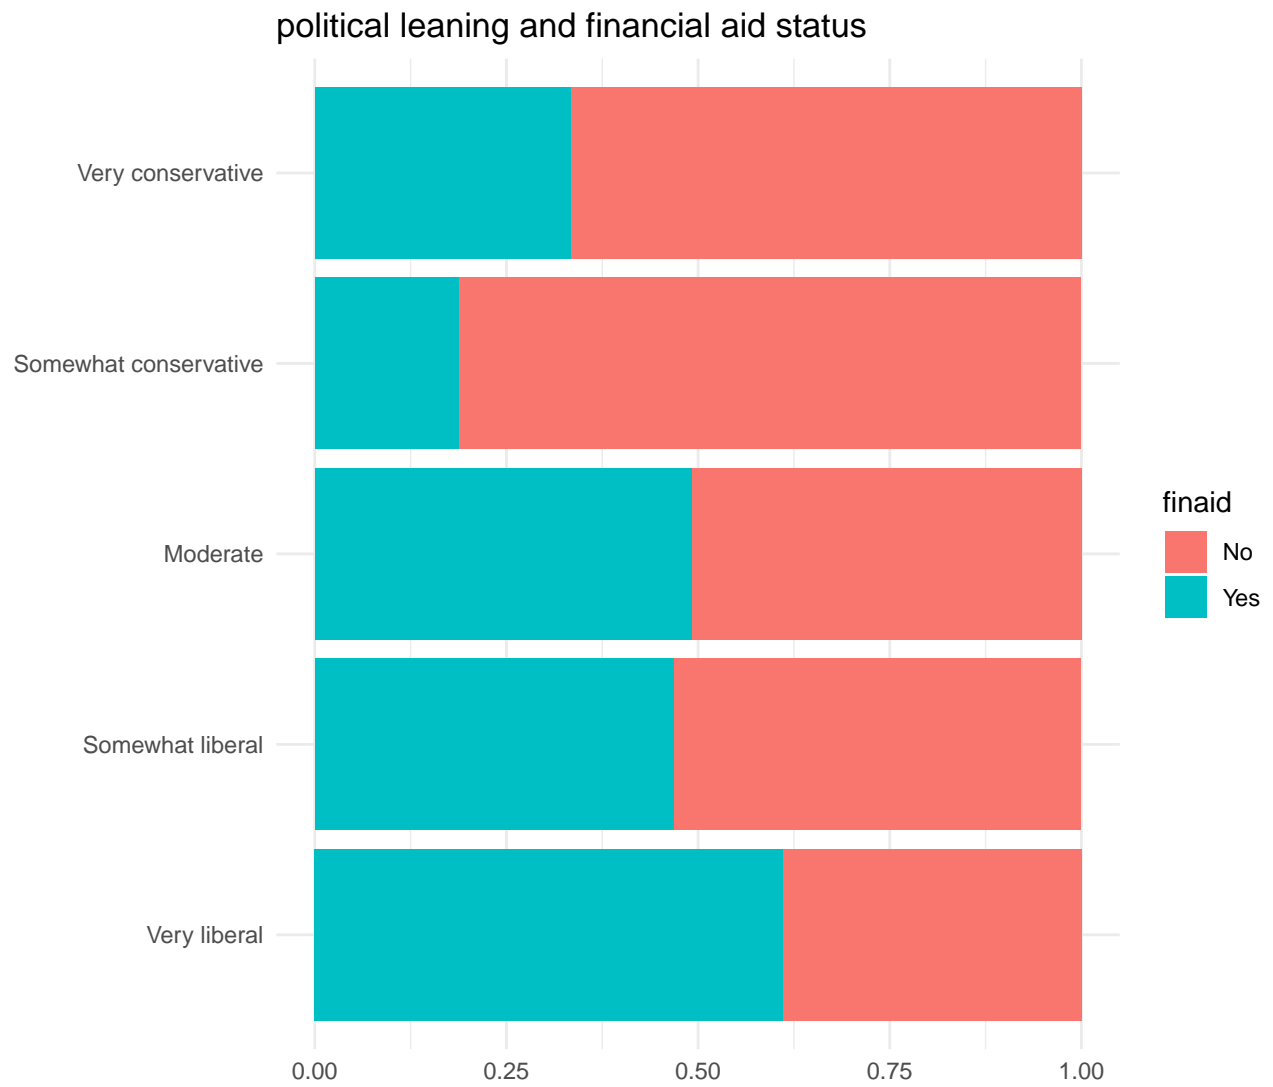

increased liberal views, decreased religiosity

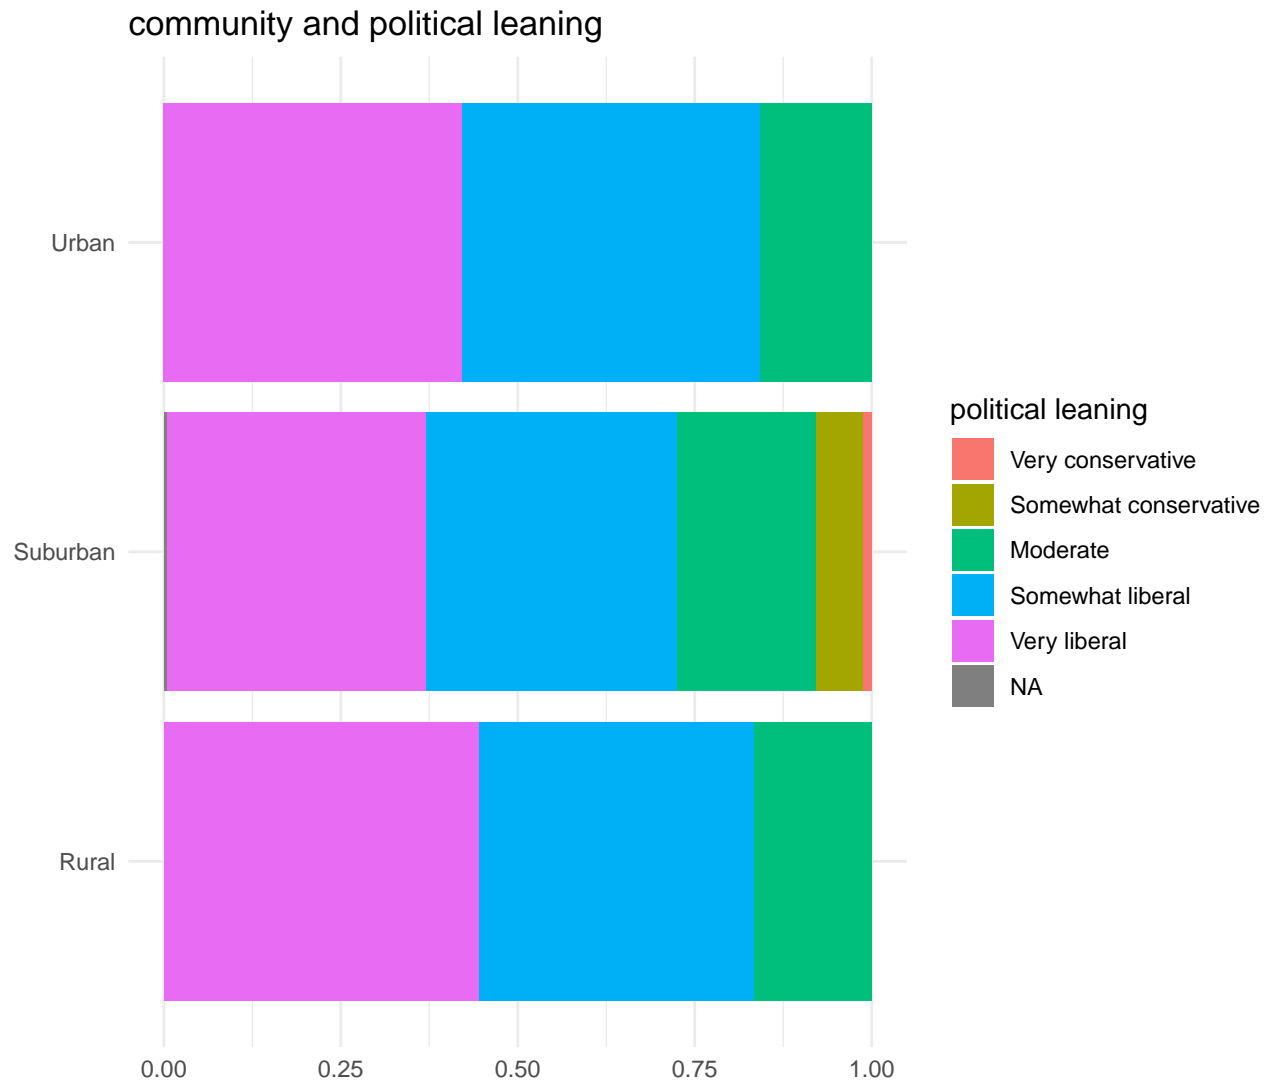

Reflecting national trends, the results from our survey show that students who identify themselves as more liberal (on a scale of Very conservative to Very liberal), also identify themselves as less religious.

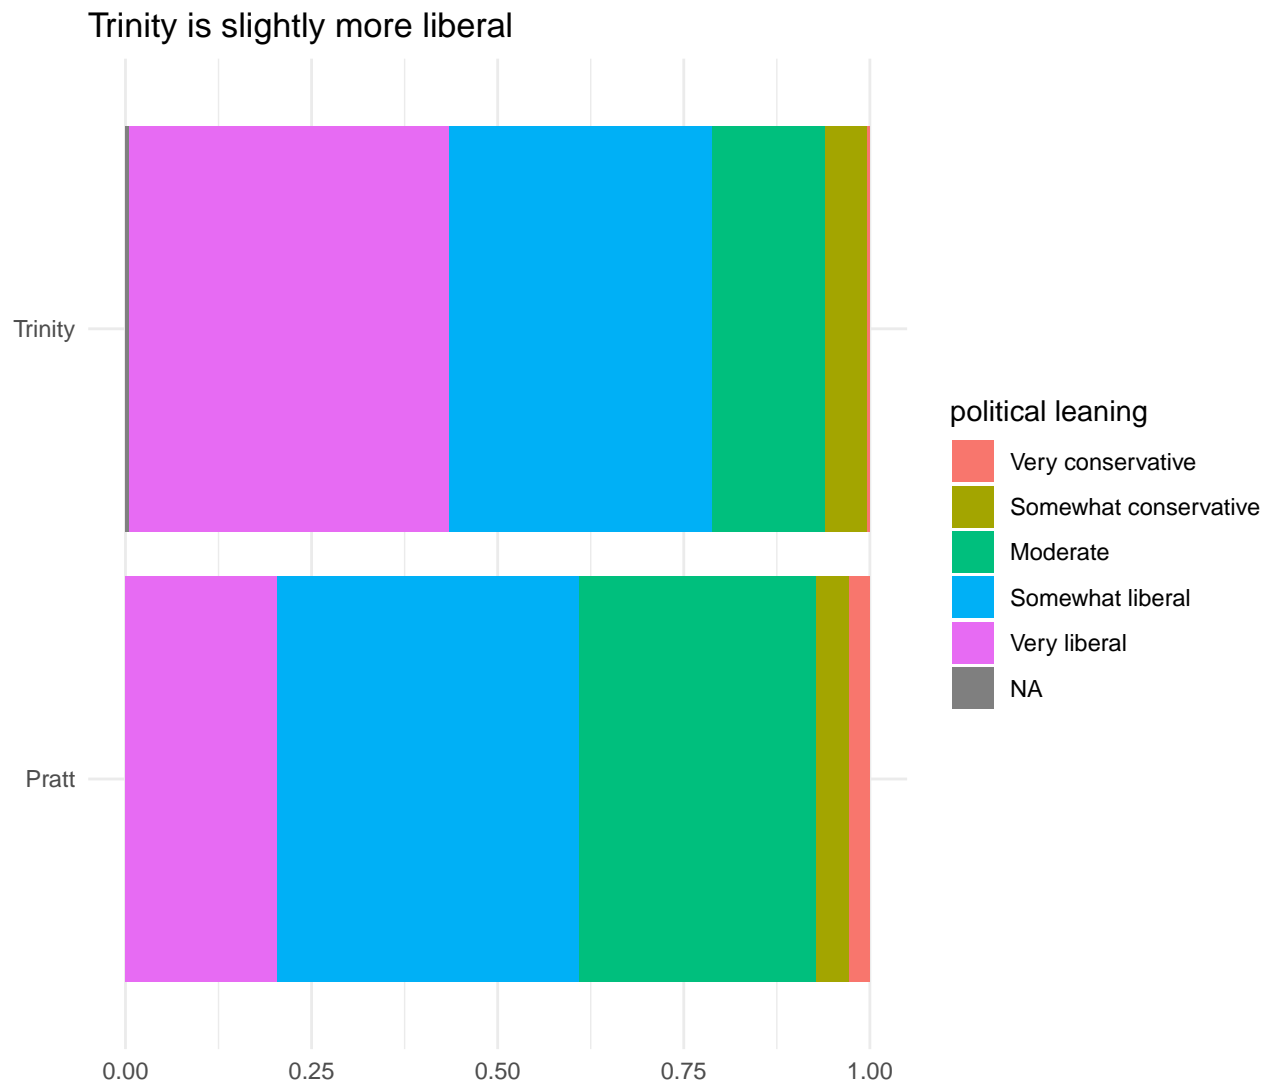

Students who identify as politically moderate to very liberal are more likely to identify with a sexual orientation other than “heterosexual.”

Students who identify as politically moderate to very liberal are more likely to be receiving some form of financial aid.

All students in our survey who identify as “Very conservative” or “Somewhat conservative” come from a suburban community.

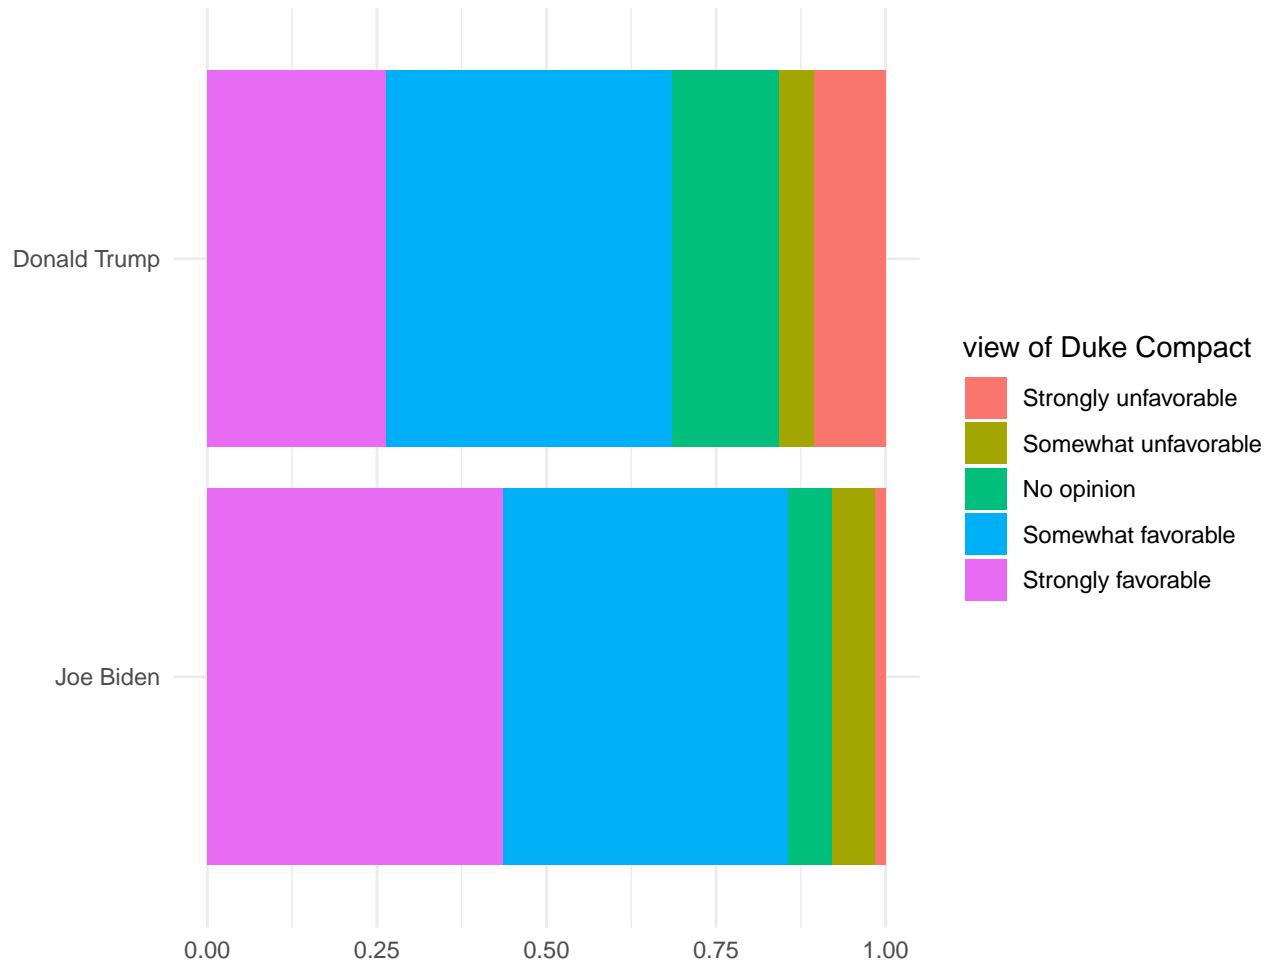

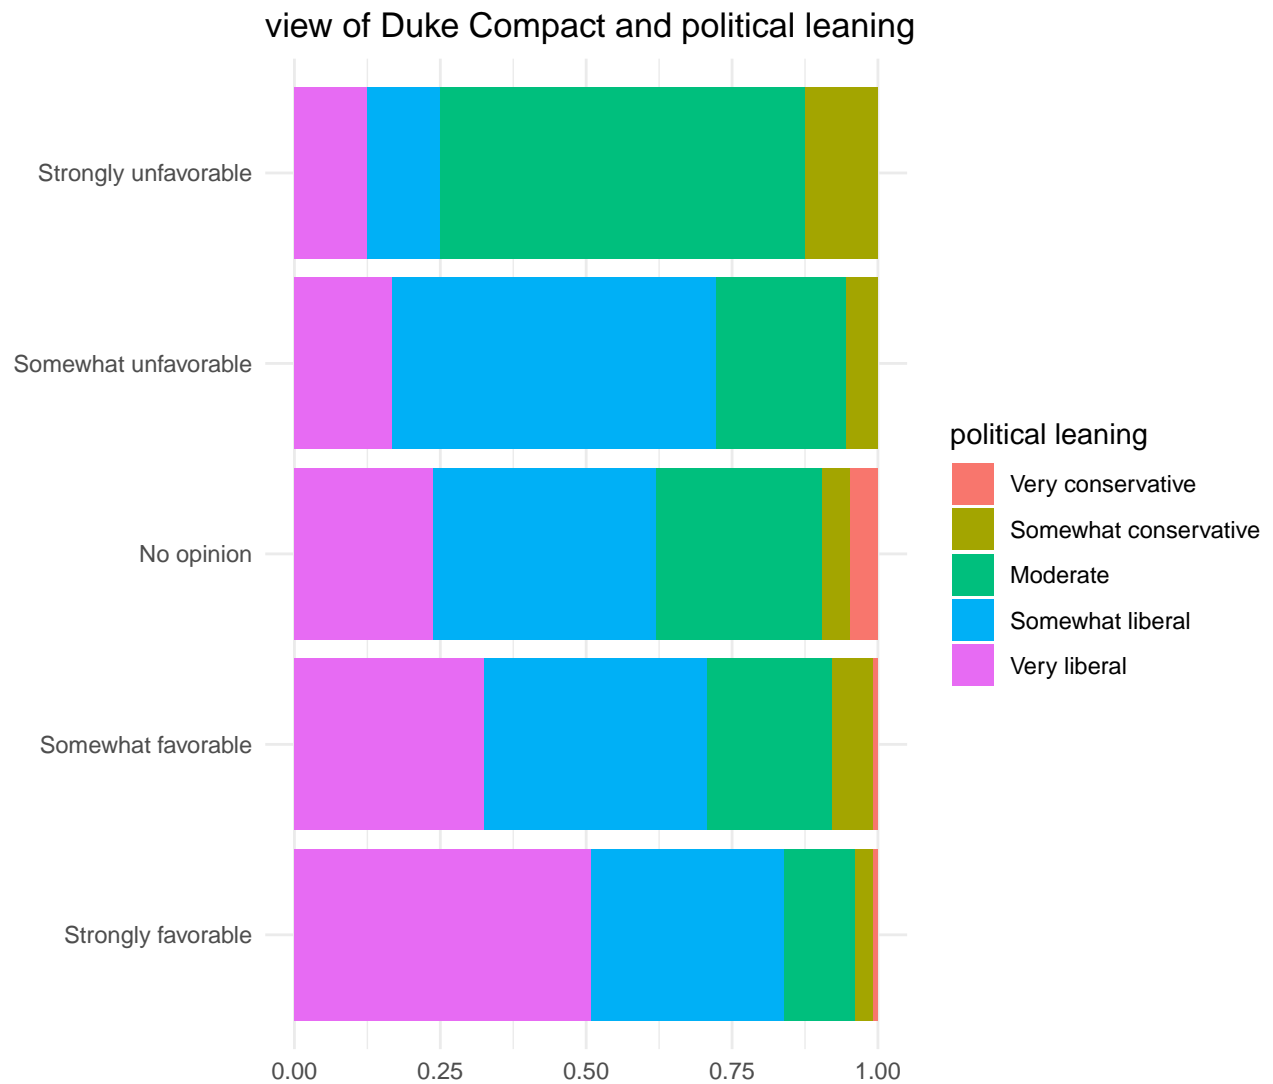

Students who identify as “Somewhat liberal” or “Very liberal” are representative of over 75% of Trinity students, while the same group is approx. 60% of Pratt’s student body.

How do liberals/conservatives feel about the Duke Compact? (I hate this too)

view of Duke Compact and presidential vote

NOTE: Howie Hawkins and Jo Jorgenson removed from data set.
One student voted for each candidate.

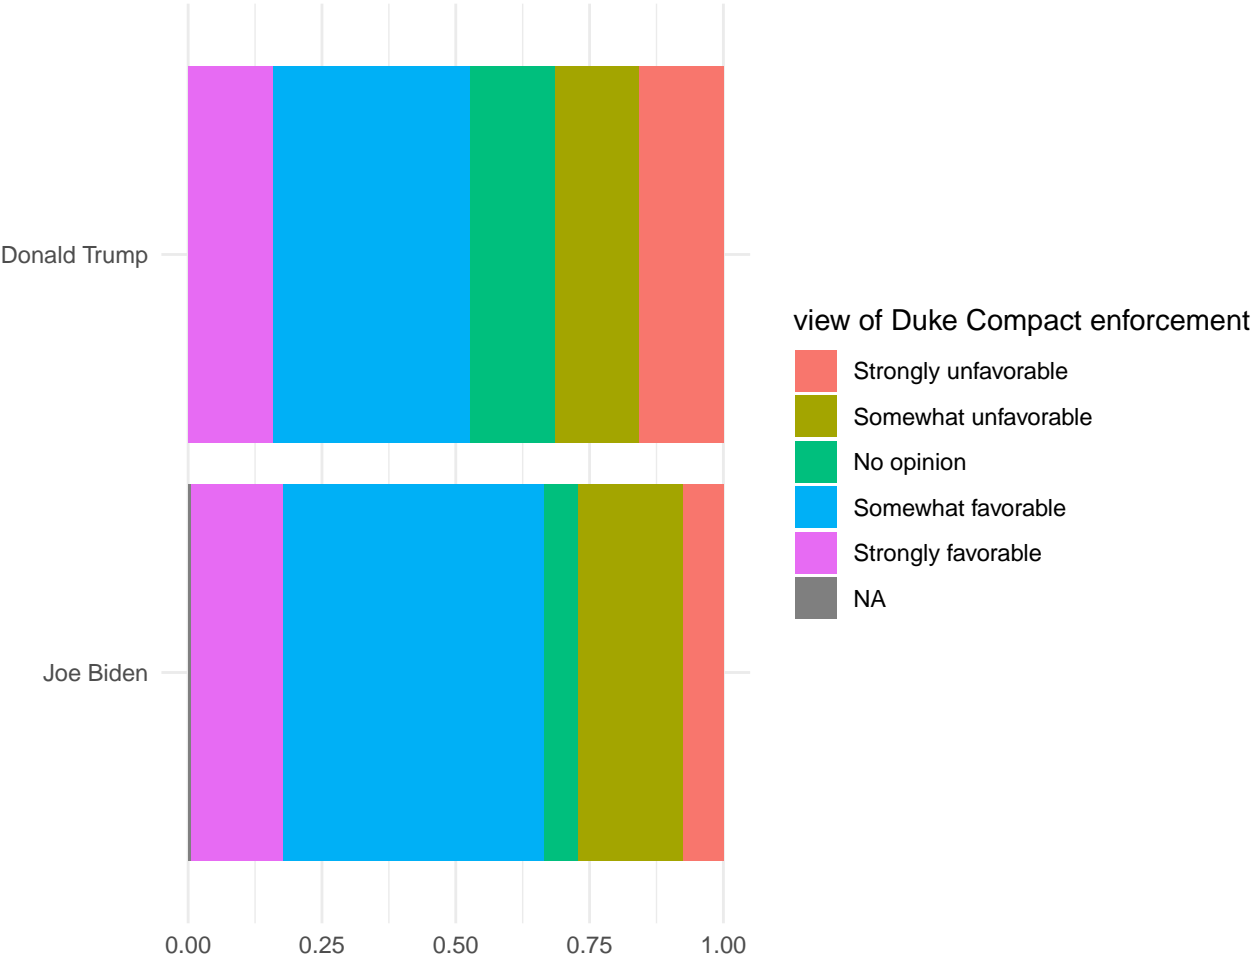

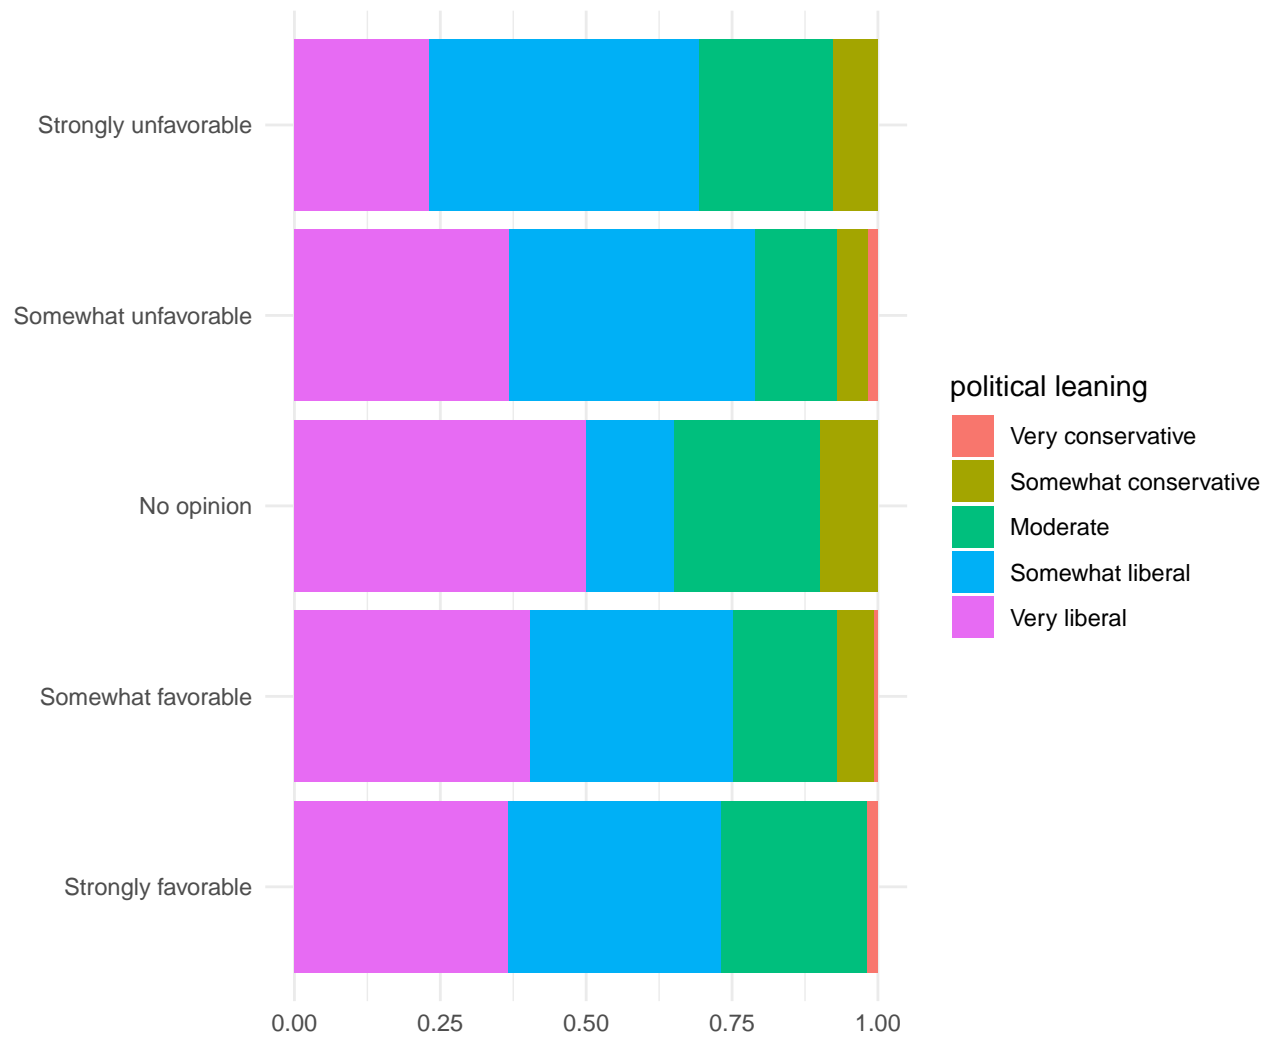

Students who voted for Joe Biden have more favorable views of the Duke Compact. Similarly, students who identify themselves as somewhat or very liberal (on a scale of Very conservative to Very liberal) have more favorable views of the Duke Compact.

view of Duke Compact enforcement and presidential vote

NOTE: Howie Hawkins and Jo Jorgenson removed from data set.
One student voted for each candidate.

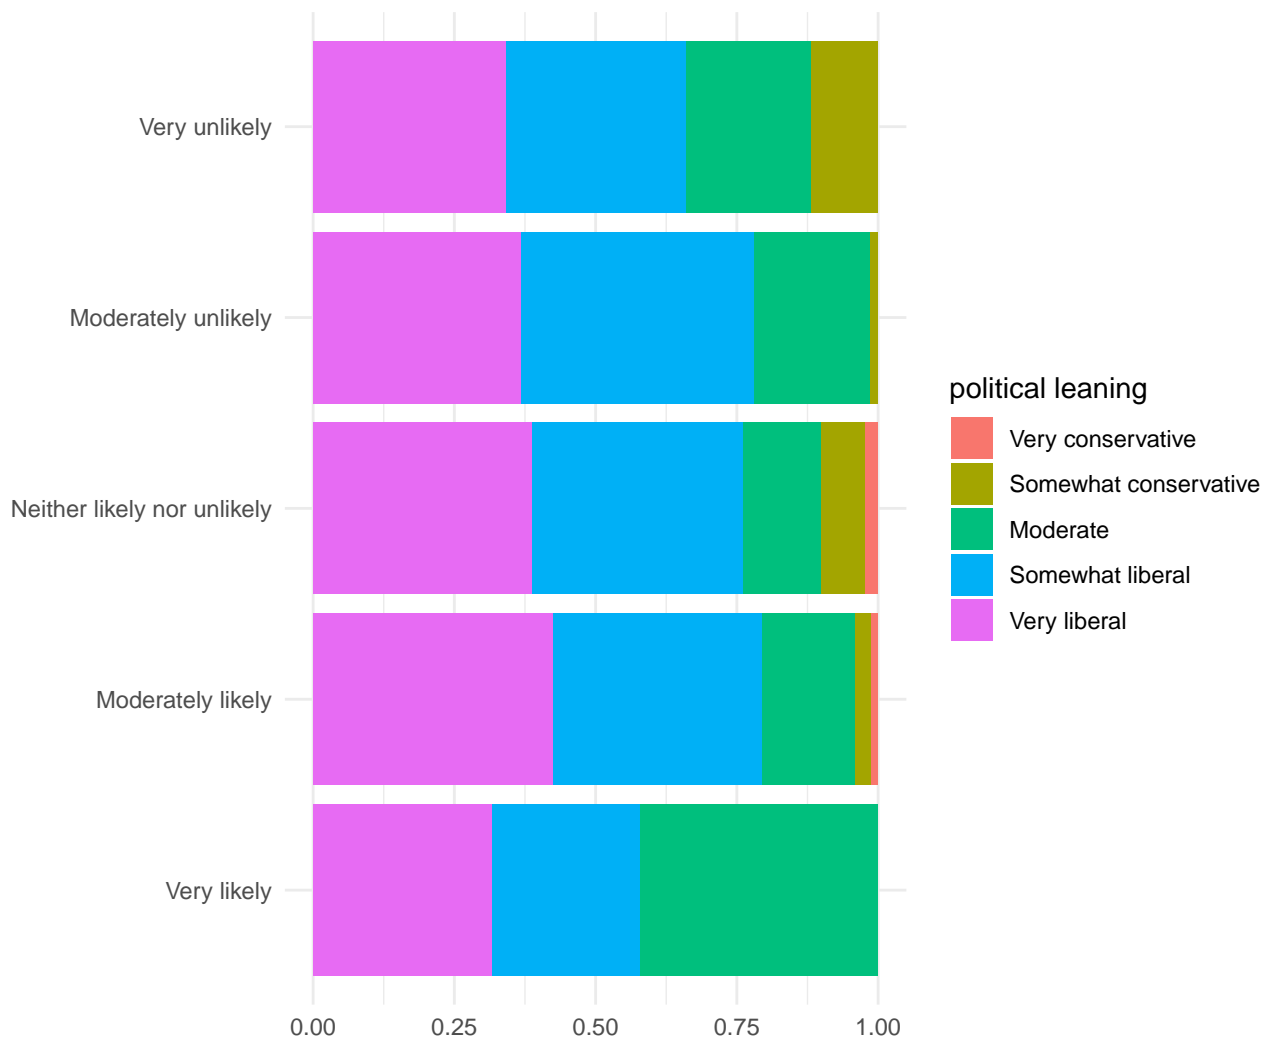

view of Duke Compact enforcement and political leaning

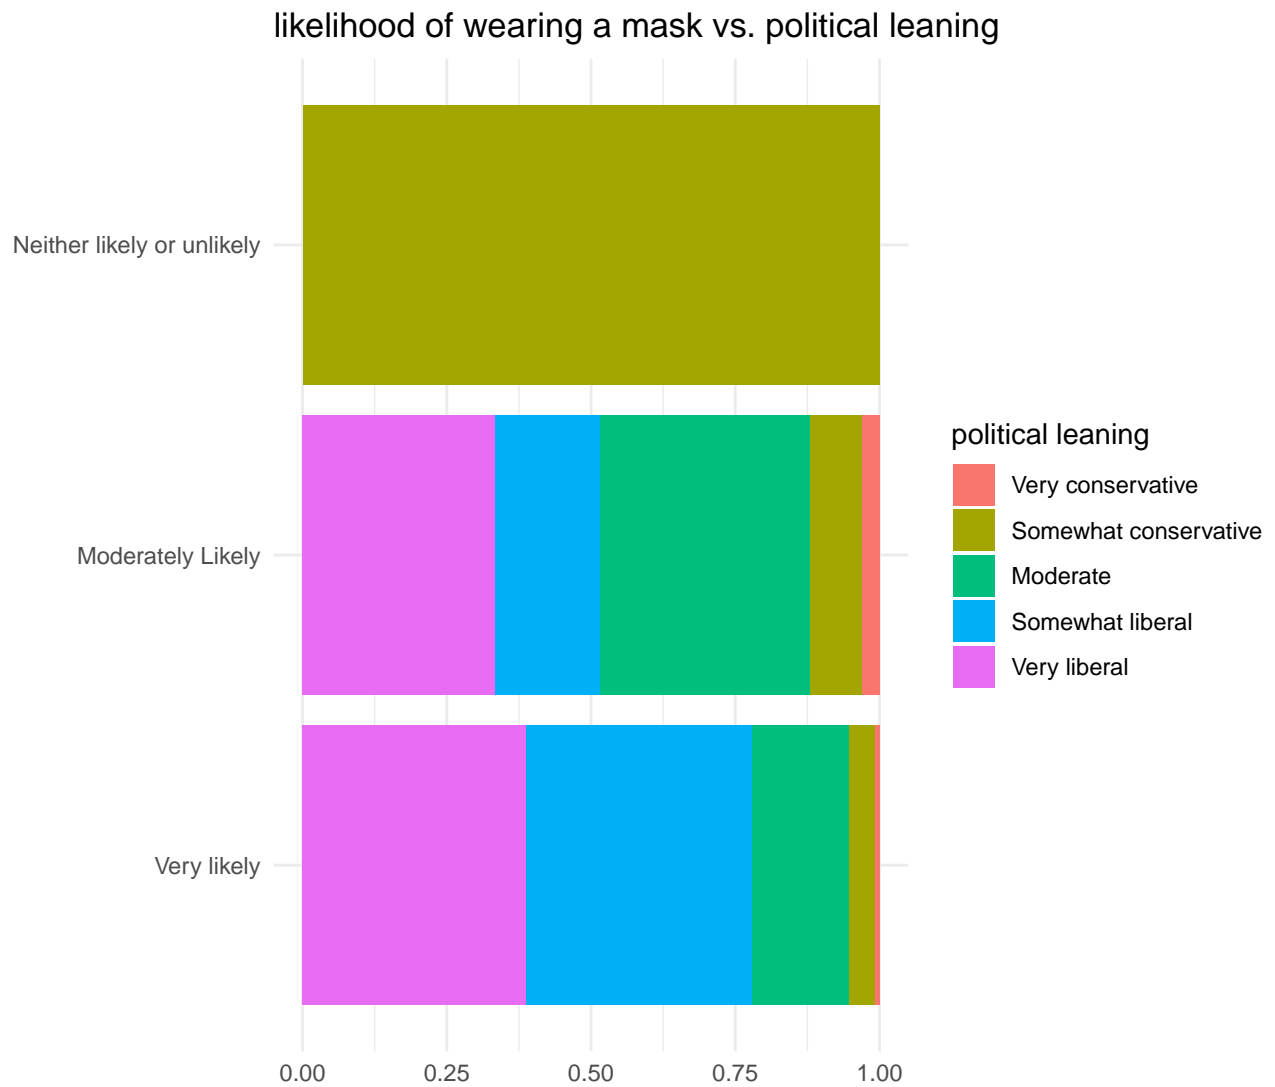

Students who voted for Trump have a more unfavorable view of Duke Compact enforcement. When view of Duke Compact is analyzed with an eye to political leaning, no trend is immediately evident.

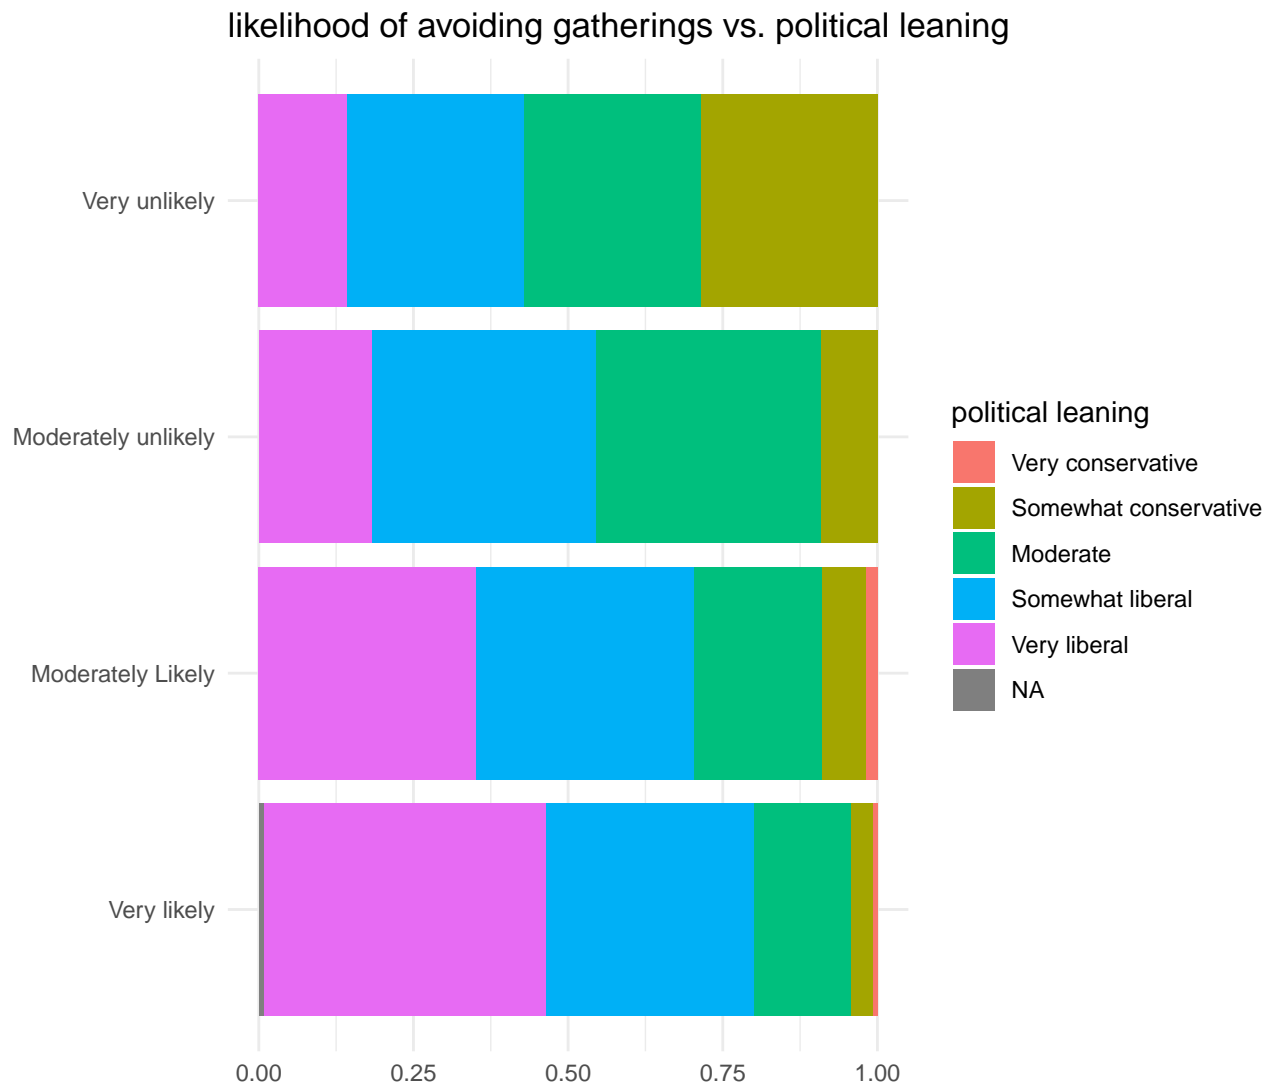

How are liberals/conservatives adhering to the Duke Compact? (I hate this too)
likelihood of reporting compact violations & political leaning

There is no pattern with regards to political leaning and likelihood of reporting Duke Compact violations. However...

Somewhat conservative students and Very conservative students are more likely to indicate that they are Moderately likely or Neither likely or unlikely to wear a mask. . .

and Somewhat conservative and Moderate students are more likely to indicate that they are Very unlikely to avoid gatherings.
